List of ADAMS codes

This page gives an overview of lists of specific codes that are used within ADAMS, useful for example when athlete profiles or Lab results are imported in ADAMS.

- Sports / Disciplines
- Organization short names
- Country/regions
- Diagnosis/classes
- Substances

Due to the revision of the Prohibited List 2020 there will be a major change on the Substance classes S1.1A Exogenous AAS and S1.1B Endogenous AAS. The subdivision into exogenous/endogenous will be removed and all AAS will be joined into one new class S1.1 Anabolic Androgenic Steroids (AAS). Consequently there is an impact on the specific codes of the substances. The new codes as of 1 Jan 2020 can be found here. The substance class S1.1 is new and contains the substances from the classes S1.1A/B: the specific codes are maintained, which means that as a Lab you can continue to use the specific codes in your batch Import/Update files as they were valid for the classes S1.1A/B. Should you however after 1 Jan 2020 want to update an existing result containing a substance of class S1.1A/B, make sure to specify the appropriate suffix _1A or _1B.
