Corrector log information

This feature allows the organization Administrator to consult/query the log generated when a user with the Corrector rule assigned makes any allowed modifications.

It is possible to specify criteria to search for precise information:

- User name: of the user who made the correction
- Action type: the possible correction
- Entity type: entity that is corrected (MO, Test, DCF, Lab result)
- Start-end date: period in which the correction occurred

For each Log the following is displayed:

- Date: links to a popup displaying the reason indicated by the Corrector when making the modification
- User
- Entity type
- Action
- New value
