Anti-Doping Tests

- Anti-Doping Tests are automatically created in the system by mission orders, and initially have a status of “Created.” When the mission order is issued, the test status will change to “Planned.”
- Planned tests on an athlete tree are visible to an NADO or an IF; they are never visible to the athlete, even if the test specifies advance notice.
- Tests may also be created manually on the tree without requiring a mission order.
- If a test is not completed (e.g. a sample is not collected for whatever reason), the test must be closed out on the tree with the appropriate status.
